

21 research activated patients

Data is from the AllStripes SURFI research cohort of 21. This information is self-reported, including diagnosis.

Sex & age

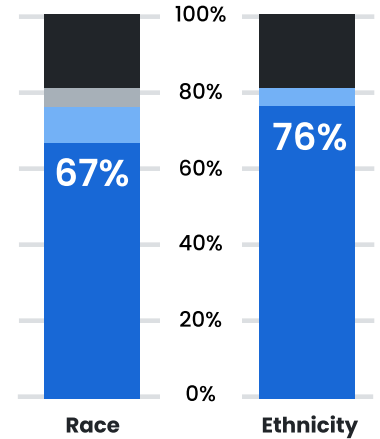

Of the 21 SURFI patients, 65% or 13 patients are female. Sex could not be verified for one patient.

The SURFI cohort spans a wide age range (0 to 18+ years) with the most patients falling in the 3-5 years old range. The median age is 7 years and the mean age is 8.8 years.

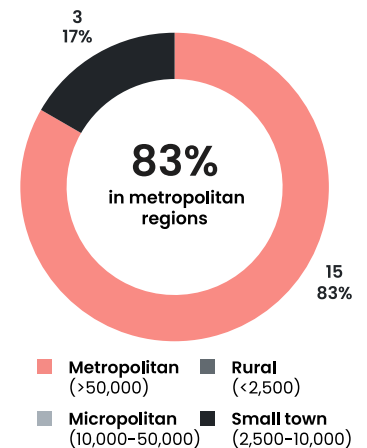

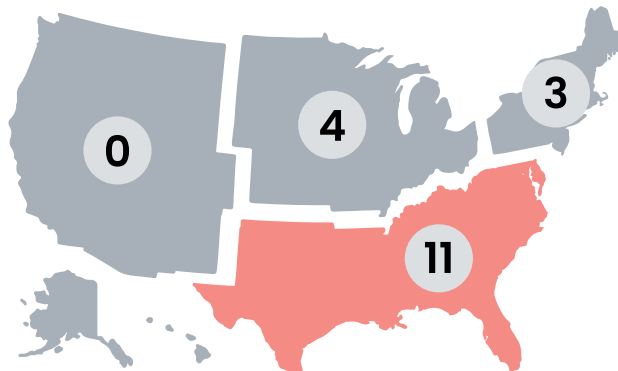

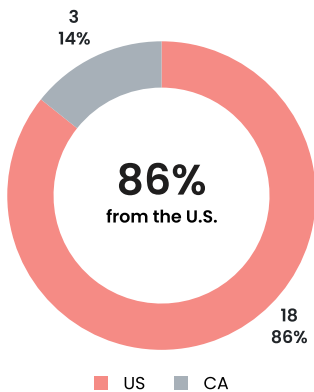

Race & ethnicity

- White (14) 67%
- Asian (2) 9%
- Multi-racial(1) 5%
- Prefer not to say (4) 19%
- Non-hispanic (16) 76%
- Hispanic (1) 5%
- Prefer not to say (4) 19%

The SURFI cohort is composed of mostly white and non-hispanic patients.

Regional distribution

Most (86%) of the SURFI cohort resides in the United States. These patients are distributed throughout the U.S. with the greatest presence in the South. Throughout the U.S., the cohort predominantly resides in metropolitan areas of more than 50,000 residents (83%).

AllStripes would like to thank **Cure Mito Foundation** for their partnership in growing this research community. AllStripes would also like to thank the patients, families and caregivers who have generously contributed data.
